

ASSEMBLY MANUAL PLANK FENCE

STEP	Picture	Comment
1		<p>Make a flat space, check deliver components, prepare tooling.</p> <p>1 - bottom rail 5 - Brush paper 2 - upper rail 6 - Stick 3 - planks 7 - rubber hammer 4 - Glue</p>
2		<p>Check if all planks fits well to the cut holes. Even the parts are produced precisly on CNC machine, as wood can be more dried or can get more moisture during storing and transport - if not fit use brush paper to slightly enlarge the holes.</p>
3		<p>Use stick to apply glue in each hole in bottom and upper rail, distribute glue around whole surface of hole. Dont let glue too much dry, close glue bottle.</p>
4		<p>Install sticks into bottom rail, make sure planks reach bottom of holes. Install upper rail to allign the planks. Start from 1 side. For longer fencing over 2m make it with 2 people. Make sure the rails are perpendicular. Push the upper rail</p>
5		<p>Clean the glue which went out of the holes. Wait 5 hours before next manipulation with fence.</p>
